

## Laboratory work Nr. 5

### Task 5 (Open Source software for web server)

1. Do some research, choose and install open source web server (apache, nginx, lighttpd...)
2. Reason Your choice regarding web server. State which license comes with the server.
3. Configure the server and change the default web page so it states: "Open source web server is up and running" when opened in the browser.
4. Check if server is working by connecting to Your server via browser (use Your server ip address is `http://ip-address-of-your-server`)
5. Prepare the report (.pdf), describing all the steps taken.
6. Upload Your report to Your repository created in work 4 and inform me via e-mail.
